ECOLOGY OF PEACE SCIENTIFIC & CULTURAL LAW

[eop-sciicultlaw¹]

[1] Scientific Law:

[1.1] Scientific Law refers to Procreation and Consumption below carrying capacity limits. EoP Footprint [eop-footprint²] defines how procreation and consumption carrying capacity limit is measured.

[2] Cultural Law:

[2.1] Cultural law refers to any racial, religious, gender cultural value agreed upon, and codified in a written agreement between two or more individuals, which does not violate any EoP scientific laws; enabling a greater degree of cooperation and mutual assistance support between such individuals. Ego literacy [ego-eco-literacy³] clarifies how to engage in and/or measure a fully informed consenting agreement.

[3] Individuals Rights and Duties under Scientific & Cultural Law:

[3.1] Property Ration [property-ration⁴] – guaranteed for life – for all individuals who have signed and abide by their responsible freedom [responsible-freedom⁵] oaths.

[4] Crimes of Aggression Violations of Scientific & Cultural Law:

[4.1] Violations of (a) Scientific Law are Procreation or Consumption Crimes of Aggression [crimes-of-aggression⁶]; (b) Cultural Law are Deception Crimes of Aggression.

Practically: How would EoP SciCult law work?.

[5] As the legal enforcement of EoP Scientific and Cultural [eop-sciicultlaw⁷] breeding/consumption international law occurs; more research will be done on

refining the consumption footprint calculator, to be accurate for all eco-regions⁸; as part of the legal evidentiary truthseeking process. Each eco-region's footprint will determine the size of a responsible freedom citizen in that eco-regions property ration [property-ration⁹]. For example: All nations will have a Consumption Footprint database, and there shall be an international consumption global footprint database. The national footprint database will include consumption footprint info for all the different eco-regions in that nation; adjusted to the global eco-footprint average property ration: 7.2 gha at a population of 1 billion, or 72 gha at population of 100 million as per suggested EoP Scientific: eco-footprint carrying capacity international law.

[6] Example: Advocacy in violation of Consumption/Procreation Limits:

[7] Jeremy heard Richard advocating on behalf of overconsumption/population. Jeremy informs Richard that advocating on behalf of overconsumption/population is illegal, and advises Richard to withdraw his advocacy on behalf of overconsumption/population and apologize. Richard (a) agrees that he was negligently advocating on behalf of overconsumption/population, and apologizes; or (b) disagrees that he was advocating on behalf of overconsumption/population; and so Jeremy and Richard go to civil court. The court finds Richard (i) innocent; Jeremy apologizes to Richard for his sincere but incorrect overconsumption/population interpretation; (ii) negligently guilty: Richard is required to go to ego & eco-literacy [ego-eco-literacy.tygae.org.za] consumption/procreation classes to learn about what kind of behaviours are overconsumption/procreation behaviours; (iii) intentionally guilty of consumption crimes of aggression [crimes-of-aggression.tygae.org.za]: the penalty for which is honourable death: Richard is allowed to remove his gene's from the genepool by means of her preferred assisted suicide preference, by a date as decided by the sentencing judge. If not done, Richard is humanely – i.e. quick death – assassinated.

[8] Example: Engaging in physical violation of Procreation Limits.

[9] Measuring with the naked eye, the birth or not of a second child is easier than measuring whether an individuals consumption is above or below the EoP footprint, by walking past their house. Any individual convicted of negligent

⁸ An ecoregion is a "recurring pattern of ecosystems associated with characteristic combinations of soil and landform that characterise that region". A large area of land or water that contains a geographically distinct assemblage of natural communities that: (a) Share a large majority of their species and ecological dynamics; (b) Share similar environmental conditions, and; (c) Interact ecologically in ways that are critical for their long-term persistence. <https://en.wikipedia.org/wiki/Ecoregion>

⁹ <http://eop-nwo-sco.tygae.org.za/eop-nwo-scp/property-ration/> archive.fo/AWxH8

procreation of a second child crime of aggression will be sterilized, and the child will be put up for adoption. Any individual convicted of intentional procreation crime of aggression will be allowed to remove their gene's from the genepool by means of their preferred assisted suicide preference, by a date as decided by the sentencing judge. If not done, they will be humanely – i.e. quick death – assassinated.

[10] Example: Engaging in physical violation of Consumption Limits:

[11] Julian is accused by Thomas of overconsumption in London, UK. Julian and Thomas go to the London library to input Julian's consumption footprint data into the library's consumption footprint calculator database. Julian and Thomas still disagree about the accuracy of their input data or the output results; and so they decide to go to London Footprint court. Julian and Thomas provide the Clerk of the Court with Julian consumption data; a Footprint police investigator checks it for accuracy; and the consumption data is submitted into the Court footprint calculator. Julian is found (a) innocent; Thomas apologizes in writing for his sincere but mistaken allegation and goes to a consumption footprint course to learn to accurately measure consumption footprint inputs; (b) negligently guilty: Julian apologizes in writing and goes to a consumption footprint course to learn to accurately measure consumption footprint inputs; (c) negligently and/or intentionally guilty: Julian disputes (i) the accuracy of one or more consumption factors measured in the Footprint calculator's sustainability accuracy; and/or (ii) the finding of his deliberate intentional violation: so the matter goes to court for Julian to provide the court with his evidence in support of the IPAT calculators factors inaccuracy; and/or mitigation of deliberate intentional violation. If the Judge considers some of Julian's evidence indicating that particular consumption factors for the eco-region are inaccurate to be reasonable; the Judge can make a recommendation to footprint database scientists to investigate Julian's evidence; or if the Judge finds Julians evidence scientifically accurate, to order the footprint database scientists to correct the particular footprint factor error in the database. If Julian is found intentionally guilty of consumption crimes of aggression [crimes-of-aggression.tygae.org.za]: the penalty for which is honourable death: Julian is allowed to remove his gene's from the genepool by means of her preferred assisted suicide preference, by a date as decided by the sentencing judge. If not done, Richard is humanely – i.e. quick death – assassinated.

[12] Example: Overconsumption/Procreation/Deception:

[13] Similarly the crimes of aggression death penalty will be applicable for individuals in cases where: (i) if Jeremy, Richard, Julian or Thomas are found to have engaged in deliberate and/or malicious inaccurate data input statements to the Clerk; (ii) any Footprint Calculator scientists are found guilty of intentionally including inaccurate footprint data, or (iii) citizens found guilty of engaging in irregular methods to enter inaccurate footprint calculator data; (iv) citizens found guilty of breeding more than one child, or hiding information from the state about one child only breeding cheating.
